Leibniz Institute for Research and Information in Education

**Knowledge
for Education**

dipf.de/en

Who we are

DIPF | Leibniz Institute for Research and Information in Education aims to make a decisive contribution to overcoming central challenges in education and plays a key role in researching them. Our goal is to promote high-quality, equitable and internationally linked education. In providing educational research, digital infrastructure and targeted knowledge transfer, we support science, universities, schools, day-care centres, administration and politics.

DIPF conducts ambitious, internationally anchored and interdisciplinary research in pursuing a research approach that is fundamental and application-orientated. Our work addresses, for example, educational conditions, educational trajectories, education in the digital world, Open Science as well as transfer and transfer research. Our comprehensive and openly available online services provide access to reliable information.

Our institute is a member of the Leibniz Association. It is jointly funded by the Federal Government and the Federal States of Germany. Around 370 employees in Frankfurt am Main and Berlin create, communicate and document knowledge for education. In order to implement our work even more effectively, we network nationally and internationally in research alliances and through further co-operations.

Our Departments

Research Library for the History of Education

Focus: Historical research on education, library and archive on German educational history in an international context

Director: Prof Dr Sabine Reh

Education and Human Development

Focus: Research on individual development and successful learning of children and their best possible support

Director: Prof Dr Marcus Hasselhorn

Information Center for Education

Focus: Research and provision of information infrastructures for educational science, educational research and the interested public

Director: Prof Dr Marc Rittberger

Teacher and Teaching Quality

Focus: Research on learning and development processes in schools, higher education and other educational contexts

Director: Prof Dr Mareike Kunter

Educational Governance

Focus: Analysis of educational inequalities as well as scientific monitoring of school and system-related reform processes

Director: Prof Dr Kai Maaz

Our Services

For Science and Universities

DIPF processes data, sources and instruments for empirical and historical educational research as well as education science, making them available in an Open Science approach. The promotion of young researchers is a particular concern of ours.

For Schools and Day-Care Centres

An active exchange of ideas and a lively co-operation with educational practitioners is very important to us. Our online services, events and publications provide a comprehensive insight into educational topics and research results. By participating in scientific projects, schools and day-care centres can actively contribute to educational research and benefit directly from it.

For Politics and Administration

DIPF is a relevant discussion partner and adviser for educational administration and politics. We support public authorities in developing empirically based quality and governance concepts. We thereby contribute significantly to the national educational monitoring. In addition, we inform the interested public on education via online portals, in podcasts, blogs and social media.
